Dana Reintroduces Center Bearing Assemblies for Additional Truck Models

Dana is continuing to reactivate production of its Spicer[®] center bearing assemblies with two more products, which have applications in trucks by major commercial vehicle manufacturers, such as Volvo, Renault Trucks, and Iveco. While these vehicles are no longer in serial production, thousands of the trucks are still on roads today, and the company recognized the need to bring its high-quality Spicer Center Bearing B-10011-00 and B-10012-00 series and related XS Midship Assemblies back to the aftermarket.

The reintroduction of the two 55-millimeter center bearing assembly series follows Dana's recent relaunch of its Spicer Center Bearing B-10013-00 series that fit many medium-duty vehicles from popular truck makers, including IVECO and MAN Truck & Bus AG.

"We have received ongoing demand for our center bearings because our aftermarket customers trust the strict, OE series production standards to which we manufacture these specialty truck assemblies," said Guido Reiter, driveshaft product manager, Dana Aftermarket Group.

"Dana's parts are known as the best on the market, and we are excited to once again make these center bearing assemblies available to our customers."

All of Dana's Spicer center bearing and midship assemblies are being manufactured to the highest production standards in Germany to ensure that customers can replace OE parts without experiencing a change in quality. Along with its B-10013-00 series, the company is maintaining the original product numbers of the Spicer Center Bearing B-10011-00 and B-10012-00 series to assist customers in selecting the right one for their truck.

The assemblies are available now and many are in stock. A table featuring the part numbers and cross reference numbers with the applicable commercial vehicles is below:

To place an order or learn more about the Spicer center bearings and related midship assemblies, visit DanaAftermarket.com.

About Dana in the Aftermarket
